# Atlas copco compressor fault codes

I'm working with a new Atlas Copco 50 hp ivr reciprocating air compressor. My problem is when i start compressor after few minutes it shows COMPRESSOR MOTOR CONVERTER TIME OUT. I have reset but repeatedly it shows same error. Please let me know what is the actual problem. Thank you in advance!

Same problem... by dennis(maryville tennessee)250z atlas copco (fault) compressor motor converter time out – does anyone know what the cause is

Me too Converter problembly: Hasan We have GA 50W VSD ..Now the problem of moter converter time out on display.plz tell me why the resin of problem and how to solve its problem.....

Atlas Copco ZR250VSD converter time outby: AnonymousDear all,i have the same issue on my ZR250VSD. after completed maintenance, we turned on power, started and appeared the error "converter time out", could not reset. now waiting for OEM coming.

Check for compressor motor converter time outby: AnonymousHi all,\* Check communication cable\* Isolate converter from module, and use the VSD simulation software to test whether module or converter is at fault.–> A PC and RS485 RS232 converter box is required as well as the DFM4win cable) is required.The cable is to be connected in place of converter cable connection. If the RS485 port is faulty ==> new module is required.– Replace modbus adapter cardNew comment? New question? Please add it here along with photos to help others help you with your compressor and equipment problem! I'm working with a new Atlas Copco 50 hp ivr reciprocating air compressor. My problem is when i start compressor after few minutes it shows COMPRESSOR MOTOR CONVERTER TIME OUT. I have reset but repeatedly it shows same error. Please let me know what is the actual problem. Thank you in advance!

Check supply power. Check for errors on display. Check emergency stop is out. Check and reset the overload relay. If it's a new installation, check the phase sequence. Compressor shuts down on high-temperature If your compressor trips on over temperature, it could be any of the following: Ambient temperature too high or not enough ventilation. Too low oil level Wrong type of oil Dirty oil cooler Thermostatic valve not working Dirt / obstruction in oil lines Compressor runs but will not load A screw compressor can run loaded (pumping air) or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check electrical power to solenoid valve Check solenoid valve coil and solenoid valve operation. Check working of inlet/loading valve Low capacity / not enough pressure First, check that there isn't a very high air demand, or air leak somewhere. If the capacity of the air compressor is really too low, check the following: Does the inlet valve fully open Check differential pressure over oil separator. Replace separator when necessary. Check if inlet filter is clean Check and replace compressed air filters (if installed). Safety valve blows / too high pressure Compressor does not unload. Check if pressure switch is correctly set and working. Check inlet valve and loading solenoid for good operation. If the safety valve is located before the oil separator, check differential pressure of oil separator. Oil in compressed air Oil in compressed air can have various causes: Oil separator old / saturated Scavenge line plugged Too high running temperature Too high oil Wrong type of oil used Minimum pressure valve not working Water in compressed air Water is a natural by product of air compression. There will always be water in compressed air, unless we remove it. Check the condensate trap for good operation. There should be water coming out every few minutes. If you open up the manual drain, there should only a little water be coming out. If you have a compressed air dryer, check the dew point. Compressor overload relay trips Check the current draw with a current clamp meter. If the motor draws excessive current: Try to turn the compressor by hand. It should be possible to turn it around. It should turn around smoothly, without any 'hiccups' (be sure to completely shut down the air compressor!). Check the isolation of the motor winding. Should be in the mega-ohms (you need an isolation tester / high voltage ohm meter for this). Check the voltage when the compressor is running. If the voltage drop significantly when the compressor starts/runs, you have a bad connection somewhere. Check all relays, fuses and electrical connections. Check if all phases are present If the motor draws it's normal current, but still trips on overload, replace the overload relay with a new one (they are known to sometimes become too sensitive when they get old) Solutions Air compressor products, parts and service Products and solutions Products and solutions Applications Products and solutions Products and solutions Products and solutions Industrial tools and assembly solutions Products and solutions Mobile construction and power equipment Products and solutions Products and solutions Atlas copco generator fault codes Atlas copco compressor fault codes You might want to use 'stays' – hooks to ensure the door stays open and doesn't fly back or slam shut in the wind. Bi-fold doors Bi-fold doors are a set of two or more glass doors that fold back onto each other in a concertina. With these types of doors, you won't need anything to hold them open as they automatically stay where you've opened them. They come in aluminium and uPVC and various colours. They're a typically stylish, contemporary option, particularly if they are in aluminium. Should I buy triple-glazed windows? Triple-glazed windows have a third pane of glass, so they should make your home warmer and more sound-proof than double-glazed windows. Some companies also use different types of gas between the panes to further prevent heat loss and Low-E glass to reflect sunlight inside. As you'd expect, triple glazing is more expensive than double. If you're really keen on getting it, but the cost is prohibitive for your entire house, think about triple glazing just the rooms that get coldest or suffer worst from external noise. Atlas copco generator fault codes En resumen puedo decir que me parece muy interesante, los planosresidenciales son una gran fuente de aprendizaje, y debemos exigir que lainformación que nos difunden nuestros docentes sean de calidad para que el día demañana seamos verdaderos ingenieros eléctricos y ayudemos con la grandeficiencia en esta área y debemos fortalecer la calidad en esta área para que el día de mañana tengamos una base para las generaciones futuras todos, y no debemos conformarnos con lo mínimo. Lo dicho, entendiendo (que no es poco). 4 0 Your abdominal muscles will be separated and the abdominal area will be opened. Your appendix will be tied off with stitches and removed. If your appendix has burst or ruptured, your abdomen will be washed out with salt water (saline). The lining of your abdomen and your abdominal muscles will be closed with stitches. A small tube may be put in the incision to drain out fluids. Laparoscopic appendectomy A tiny incision will be made for the tube (laparoscope). More cuts may be made so that other tools can be used during surgery. Carbon dioxide gas will be used to swell up your abdomen so that your appendix and other organs can be easily seen. The laparoscope will be put in and your appendix will be tied off with stitches and removed through an incision. When the surgery is done, the laparoscope and tools will be removed. The carbon dioxide will be let out through the cuts. A small tube may be placed in the cut to drain out fluids. Procedure completion, both methods Your appendix will be sent to a lab to be tested.
